Interpretation

DISTRACTION INDEX (DI). The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.27.

OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.

Distraction Index Chart:

LABRADOR RETRIEVER

BREED STATISTICS: This interpretation is based on a cross-section of 43256 canine patients of the LABRADOR RETRIEVER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.25 - 0.73) for the breed. The breed average DI is 0.44 (solid square). The patient DI is the solid circle (0.27).

SUMMARY: The degree of laxity (DI = 0.27) falls within the central 90% range of DIs for the breed. This amount of hip laxity places hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.
